

Michigan League FOR Human Services

CELEBRATING 100 YEARS OF RESEARCH AND ADVOCACY

April 10, 2012

Honorable John Moolenaar  
Michigan State Senate  
P.O. Box 30036  
Lansing, MI 48909

Dear Senator Moolenaar:

As you make final decisions on the Department of Community Health budget, I am writing on behalf of the Michigan League for Human Services to encourage you and your colleagues to consider the long-term impacts of your decisions, not just a short-term goal of reaching a dollar target. As you know, health care needs do not diminish when funding for services is reduced or eliminated; they often escalate and become more expensive to treat or resolve. Please keep in mind that your decisions directly impact people's lives and are not just numbers on a spreadsheet.

The Michigan League for Human Services supports the absence of major reductions in the Medicaid program, and strongly supports the governor's recommended increase to Healthy Kids dental, expanding the program to about 125,000 Medicaid-eligible children. Access to quality oral health services will reduce school absenteeism as well as long-term health consequences that result from untreated oral health issues. Tooth decay, an easily treatable condition, remains the most prevalent chronic disease of children, more common than asthma. We are very disappointed that the Senate subcommittee did not fully support the recommendation, instead choosing to add a \$100 placeholder.

It is also of concern that on the day mandated coverage of Autism Spectrum Disorders in the Medicaid program was passed by the Legislature and sent to the governor for his signature, the subcommittee did not support the governor's recommended funding in Medicaid for Autism coverage, again choosing to add \$100 placeholders. To implement this mandate, funding will be required.

While this legislation is very important and valuable to Medicaid/MICHild children and their families, this policy does pick winners and losers. There are many other disorders that require early treatment to be most effective. A greater step toward mental health parity would have been preferable public policy.

The League believes disinvestments in Graduate Medical Education are shortsighted in view of the upcoming physician shortage and the dramatic increase in Medicaid enrollees beginning in January 2014. The importance of this program is demonstrated by the recent passage of supplemental appropriations restoring all but \$6 million of the FY 12 reduction, initially \$32 million. The Senate subcommittee recommendation of a \$100 placeholder, while keeping the issue under discussion, certainly makes program administration very difficult and continuity very uncertain.

While the many \$100 placeholders included in the subcommittee recommendation demonstrate interest in important policies and programs, keeping them on the table for discussion, and we are pleased that discussions continue, they do not represent needed funding commitments for key programs.

Honorable John Moolenaar

In addition, we are also very concerned about prior disinvestments in other Community Health programs including:

- Multiyear cuts to non-Medicaid mental health services which continue to stress the system and those who need care. Research has documented the significant stress on individuals and families during times of economic downturn and high unemployment. Michigan's economy is improving but is not yet recovered, and the reductions of more than \$50 million over the prior three years will result in individuals with serious mental illnesses not receiving the care they need in the right setting. Some are likely to end up in the corrections system.
- Healthy Michigan program disinvestments will detract from the state's ability to achieve the governor's goal to "promote wellness programs to reduce costs, improve quality of life, and increase the chances of detecting health conditions before they become chronic."
- Multiyear cuts in public health funding, more than \$3 million over the prior three years, making it more and more difficult for local health departments to provide the essential services (immunizations, water and food safety inspections, hearing and vision screenings for children, to name a few) that benefit all Michigan residents.
- Eligibility restrictions for Adult Home Help program recipients and their impacts on recipients' abilities to remain in the community when services are reduced or eliminated. This policy had been considered in the past and not pursued due to the negative impact on significant numbers of recipients, particularly those with mental health conditions. Due to the policy phase-in, negative impacts are not yet documented.

I urge you, as you make final decisions on the Department of Community Health budget, to weigh your decisions on their impacts on low-income residents – whether their lives will be positively impacted or diminished.

I would ask you to also consider the economic impact of Medicaid budget cuts on providers and communities. For every state dollar cut from the program, \$2 of federal funding are also lost, resulting in the loss of \$3 of health care services for Medicaid recipients, and \$3 of economic activity is taken away from communities, reducing, not creating jobs.

Feel free to contact me should you wish to discuss the Department of Community Health budget or receive additional information. Thank you for your tireless work on this budget.

Warmest regards,

Gilda Z. Jacobs  
President & CEO
